- Figma / Axure
- Responsive web designs

Content Creation & Graphic Design
- Canva
- Procreate
- Final Cut Pro
- Adobe Creative Suite

Misc.
- Microsoft Office Suite
- Amazon Web Services
- Git Version Control

PROJECT PORTFOLIO

Mobile Development

GOPARKING
iOS + Android Application | Flutter

GoParking is a proof-of-concept mobile application that allows users to rent physical carpark spaces from public and private carparks for a one-time or a recurring subscription fee.

Developed as a FinTech Final Year Project, sponsored by NETS.

Mobile Development

APD SKIN MONITORING APP
Android Application | Java

An app that helps users keep track of their wound healing progress. Has features such as area calculation, color analysis of image and comparison of wounds over time.
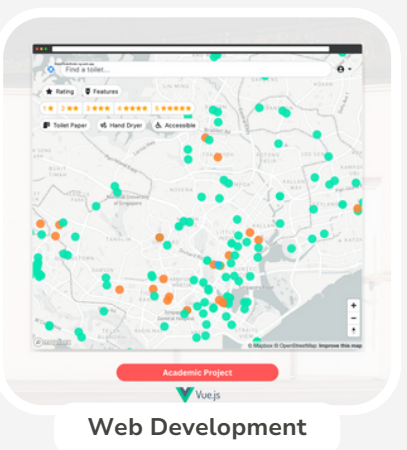

Developed under A*STAR's APD Lab.

Game Development

VR: THE PETS WORKSHOP
VR Game | Unity Engine

A VR Game that simulates a basic pet grooming session: cutting a dog's hair, clipping the nails and cleaning the ears. This can be used to train newbie pet groomers and improve the skills of experienced groomers while cutting down on resource and training costs.

Developed as an SMU-X Project (VR For Business) sponsored by The Pets Workshop.

Web Development

TOILETFINDERSG
Web Application | HTML-CSS-JS

A crowdsourced web app for users to share information on public toilets around Singapore. Users can search for toilets near them based on filters they choose, such as the availability of hand dryers and toilet paper, or if the toilets have handicap accessible stalls.

Developed as an academic project.
